

Scope of Work Checklist

The Scope of Work (SOW) is the official description of the work that is to be completed during the contract. Tasks 1-6 outlined in the SOW are for illustrative purposes only.

Applications with missing components will be at a competitive disadvantage. Please use this checklist to make sure your Scope of Work is complete.

Scope of Work Checklist	
(✓)	Ensure these items are completed prior to submitting to Caltrans
✓	Use the Fiscal Year 2024-25 template provided
✓	Include the activities discussed in the grant application
✓	List all tasks using the same title as stated in the Project Cost and Schedule
✓	Include task numbers in accurate and proper sequencing, consistent with the Cost and Schedule
✓	Exclude sub-task numbers; only include sub-headings
✓	Exclude tasks for project management and/or staff/consultant coordination; these activities should be spread among relevant tasks
✓	Include a thorough Introduction to describe relevant background, related planning efforts, the project and project area demographics, including a description of the underserved community involved with the project, if applicable
✓	Include a thorough and accurate narrative description of each task
✓	Task 01 is a required task. It must be titled "Project Administration", it cannot exceed 5% of the grant award amount, and only the grantee and sub-recipient(s) can charge against this Task. This Task must only include the following activities and deliverables: • Caltrans and grantee Project kick-off meeting at the start of the grant • Invoicing and quarterly reporting to Caltrans • DBE Reporting (federal grants only)
✓	Include Task 02 for the procurement of a consultant (if needed). This task is for the <u>grantee and sub-recipient(s) only</u> .
✓	Include detailed public participation and services to diverse communities in the Public Outreach Task (excluding technical projects)
✓	Identify public outreach strategies in a manner that provides flexibility and allows for a diverse range of outreach methods (both in-person and on-line), excluding technical projects
✓	Include a Task(s) for a Draft and Final product. The draft plan must include an opportunity for the public to provide feedback (excluding technical projects).
✓	Include a summary of next steps your agency will take towards implementing the project in the Final Product
✓	List achievable project deliverables for each Task
✓	EXCLUDE environmental, complex design, engineering work, and other ineligible activities outlined in the Grant Application Guide

SCOPE OF WORK

Project Information	
Grant Category	Sustainable Communities Competitive
Grant Fiscal Year	FY 2024/2025
Project Title	Rengstorff Avenue Complete Streets Study
Organization (Legal name)	City of Mountain View

Disclaimer

Agency commits to the Scope of Work below. Any changes will need to be approved by Caltrans prior to initiating any Scope of Work change or amendment.

Introduction

The Rengstorff Avenue Complete Streets Study (Study) will consider ways to enhance safety, incorporate green street elements, and improve multimodal access for people walking, bicycling, using public transit, and driving the 1.7-mile corridor along and across Rengstorff Avenue between El Camino Real and Leghorn Street.

Rengstorff Avenue is on the City's high injury network and was identified as the highest priority corridor in the City's Comprehensive Modal Plan ("AccessMV"), based on equity, mobility, walkability/bikeability, safety, sustainability, and consistency criteria.

The entire length of Rengstorff Avenue is a key school access route for Los Altos High School and Waldorf School. Additionally, the roadway is within the school catchment for six other schools. (See Attachment 1). The intersections of Rengstorff Avenue with Rock Street, Junction Avenue, Montecito Avenue, Stanford Avenue and Latham Street are along the City's suggested routes to school for Crittenden Middle, Monta Loma, Stevenson, Mistral and Castro Elementary, and Graham Middle schools. Rengstorff Avenue corridor also serves as a key route to Rengstorff Park, Heritage Park, Wyandotte Park, Mountain View Community Center and Mountain View Senior Center. The roadway is the City's key senior route between the Senior Center and the neighborhood with the highest proportion of senior housing.

As shown in Attachment 2, the project serves two locally recognized equity priority neighborhoods including a neighborhood with a high proportion of senior low-income households that is bordered by Rengstorff Avenue, Middlefield Road, Sierra Vista Avenue and Central Expressway; and a neighborhood with a high proportion of low-income and Spanish speaking families and households that is bordered by Rengstorff Avenue, Caltrain, Escuela Avenue and El Camino Real.

Major deliverables for the Study will include:

- parking and traffic analysis,
- community and stakeholder engagement,
- preliminary concept development and feasibility analysis, and
- plan line drawings for a preferred concept
- high-level cost estimate for the preferred alternative.

Parties involved in community and stakeholder engagement will include local community-based organizations, the City's Bicycle/Pedestrian Advisory Committee and Council Transportation Committee.

The Study is consistent with, and will connect to various local, regional and state planning efforts including California's Executive Order B-55-18, Senate Bill 32, Plan Bay Area 2050, the City of AccessMV, Vision Zero Policy, Vision Zero Action Plan, and Local Road and Safety Plan. It will also align with planned complete streets improvements associated with Rengstorff Avenue Grade Separation (which will incorporate Class IV protected bikeways, sidewalk widening, and intersection improvements), and intersection improvements at Rengstorff Avenue/Latham Street and Rengstorff Avenue/Junction Avenue.

Project Stakeholders

Key project stakeholders are listed in Task 4 and will be engaged as outlined in that task.

The City will establish a technical advisory committee (TAC) of internal City staff from various departments, including Public Works, Community Development, Community Services, and the City Manager's Office (Sustainability Team). The City's project manager will schedule periodic meetings check-in meetings with the Caltrans representative to update on progress of the project.

Community engagement will be an ongoing effort, with two to three rounds of engagement events scheduled at key project milestone points. Engagement events include community meetings, pop-up events and presentations at Bicycle/Pedestrian Advisory Committee (BPAC), Council Transportation Committee (CTC), school community and public meetings/open houses. These events will focus on presenting updates on the project and gathering feedback from community members and stakeholders.

The City will utilize consultant services to deliver the full scope of the project.

Overall Project Objectives

The Rengstorff Avenue Complete Streets Study (Study) is a critical project addressing existing safety concerns, enhancing equity, and improving overall community well-being. The Study will consider treatments that include the following:

- Crossing improvements;
- Other intersection improvements;
- Speed management strategies;
- Sidewalk extensions and improvements;
- Bicycle facility upgrades;
- Green street elements; and
- Opportunities for driveway access management.

Summary of Project Tasks

Task 01: Project Administration

Upon grant authorization, the City will hold a kick off meeting with key project stakeholders including Caltrans. The City's project manager will conduct periodic check in meetings with the

Caltrans representative to provide project status updates and will process quarterly invoices and provide progress reports.

Task Deliverables
Kick-off meeting with Caltrans – Meeting notes Quarterly invoices and progress reports

Task 02: Consultant Procurement

The City will procure a consultant, consistent with City and grant requirements, Local Assistance Procedures Manual for procuring non-Architectural and Engineering consultants, the Grant Application Guide, Regional Planning Handbook, and the executed grant contract between Caltrans and the City.

Task Deliverables
- Request for Proposal/Qualifications - Copy of the contract between consultant and grantee - Copies of all amendments to the consultant contract

Task 1: Existing Conditions and Background Review

The project team will review background materials including local and regional plans, past studies, transportation plans, and approved/planned development projects. This information is essential to develop the framework for subsequent tasks within this scope of the work.

The project team will conduct a project kickoff meeting with the Consultant. The Consultant will provide documentation of the kick-off meeting. Key stakeholders will be included in the kick-off meeting.

The project team will also compile or collect key data pertinent to developing and analyzing alternatives including:

- As-built drawings of public rights-of-way (ROWs) in the study area;
- Curb-to-curb, ROW-to-ROW, and lane widths;
- Multi-modal traffic counts at key locations and/or intersections;
- Parking inventory and utilization data, which may be supplemented by City staff;
- Speed survey data;
- Traffic collision data; and
- Demographic and land use data, include underserved communities

This task will also include regular check in meetings and project management for Task 2.

Task Deliverables
- Draft & Final Existing Conditions Memo - Kick-off meeting notes

Task 2: Alternatives Development and Analysis

The project team will develop schematics for up to three concept alternatives. This task may include a tiered approach to identify a range of alternatives and evaluate those alternatives based on preliminary information. The team will then conduct a fatal-flaw analysis to remove alternatives that do not meet the purpose and need of the project. Alternatives for the corridor could include:

- Crossing improvements including bulbouts, high-visibility crosswalks, median crossing islands, RRFBs, and Pedestrian Hybrid Beacons;
- Other intersection improvements including lighting, pedestrian refuges, reduced turn radii, and protected left-turn phases;
- Speed management strategies including road diets, lane narrowing, center medians and opportunities for reduced posted speed limits;
- Sidewalk extensions and improvements including bulbouts and bus stop treatments;
- Bicycle facility upgrades including Class IV bikeway facilities and protected intersections;
- Green street elements including sustainable stormwater infrastructure, street trees, and native pollinator landscaping; and
- Opportunities for driveway access management.

The feasibility, pros, and cons of each alternative are assessed in relation to the following criteria. These criteria will be updated (as needed) based on the feedback from the technical advisory committee and community feedback.

- Pedestrian safety, convenience, and comfort;
- Bicycle safety, convenience, and level of traffic stress;
- On-street parking demand and availability;
- Motor vehicle speed and volume;
- Transit access and on-time reliability;
- Right-of-way and utility impacts;
- Access impacts (deliveries, garbage)
- Biodiversity, stormwater and compatibility with environmental and social context; and
- Community support
- Estimated capital and ongoing cost.

Alternatives comparison will be vetted through the technical advisory group.

This task will also include regular check in meetings and project management for Task 3.

Task Deliverables
- Schematic layouts for initial screening/fatal-flaw analysis - Screening criteria memorandum - Summary of Alternatives Analysis - Kick-off meeting notes

Task 3: Outreach and Community Engagement

The project places a robust emphasis on stakeholder involvement and a collaborative approach to sustainable transportation through several key strategies:

- Technical Advisory Committee: - includes internal City stakeholders from various divisions including Police Traffic Enforcement, Fire Emergency Response, Traffic Engineering, Civil Infrastructure and Sustainability.
- Multi-Lingual and Targeted Outreach: Community engagement opportunities for the Study will be publicized using multilingual materials such as postcards, yard signs and posters. Postcards will be sent to tenants, owners, and businesses within the study area, while posters will be posted in locations frequented by underrepresented residents such as laundromats, schools, poles in low-income neighborhoods and affordable or transitional housing developments.

Outreach materials will also include email blasts sent to key stakeholders such as transit agency contacts (VTA and MTMA), Community Based Organizations (such as Mountain View Dayworker Center and El Cafecito), Spanish and Chinese Leadership Academy members, school administrators and Safe Routes to School contacts, and other transportation and environmental advocacy organizations. Further outreach will be undertaken by the City's Multicultural Engagement Coordinator who maintains a mailing list of non-English speaking community stakeholders.

- Community Engagement Processes: The Study incorporates extensive community engagement processes, including public meetings, surveys, and pop-up engagement events at community gathering places such as the Senior Center, Community Center and Rengstorff Park.
- Virtual Engagement Events, Surveys and Online Platforms: Recognizing the diverse needs and preferences of stakeholders, the Study will utilize virtual engagement events to accommodate a wider range of participants and ensure inclusivity and accessibility for working families and others who may face physical or time constraints.
- Committee and Council Presentations: Presentations to the Bicycle/Pedestrian Advisory Committee, Council Transportation Committee and/or City Council will serve to keep key decision-makers informed and engaged.
- Feedback Incorporation. The Study demonstrates a commitment to incorporating feedback received from stakeholders. For example, survey respondents for the City's Active Transportation Plan noted the lack of continuity and poor condition of sidewalks along Rengstorff Avenue—which will be addressed in this Study.

Specific outreach methods to involve underserved communities in the area include the following:

- Translation of outreach materials such as postcards, yard signs, posters and surveys into Spanish and Chinese, with support from the City's Multicultural Engagement Team;
- Distribution of multi-lingual outreach material to the City's mailing list of Community Based Organizations, multicultural contacts including graduates of the City's Spanish Leadership Academy and Chinese Leadership Academy;
- Posting of additional outreach materials in underserved communities such as posters on telegraph poles, laundromats and school offices;
- Translation and interpreting services for engagement events;
- Multilingual pop-up events that may be held at Rengstorff Park, Mountain View Senior Center and/or the Mountain View Community Center on Rengstorff Avenue.

This task will also include regular check in meetings and project management for Task 4.

Task Deliverables
Outreach plan; PowerPoint Presentations, flyers, website announcements, sign-in sheets, community surveys, conceptual drawings, bilingual services

Task 4: Refinement and Selection of Preferred Alternative

The project team will use screening criteria developed under Task 3 refine alternatives. This information, along with community and stakeholder feedback, will also inform selection of the preferred alternative.

After the preferred alternative has been identified, preliminary concept drawings will be developed for the preferred alternative along with high-level cost estimate, including right-of-way cost (if any).

This task will also include regular check in meetings and project management for Task 5.

Task Deliverables
Preferred alternative selection memo Concept drawing and high-level cost estimate for preferred alternative

Task 5: Draft and Final Plan

Following the alternatives analysis and community engagement process, project draft report will be prepared as an accessible and easy to read document. The draft plan will include:

- Executive Summary
- Existing Conditions Analysis
- Alternatives Development and Analysis
- Outreach and Community Engagement Summary
- Selection of Preferred Alternative
- Next Steps, including implementation strategies and future grant opportunities

The final plan (and associated technical studies) will include next steps that will detail the implementation strategies and identify future grant opportunities for next phases of the project.

This task will also include regular check in meetings and project management for Task 6.

Task Deliverables
Draft Plan, Public Review comments, Final Plan for Committee/Council Review and approval.

Task 6: Committee/Council Review

The project team will present the draft plan developed under Task 6 to the Committees/Council for review and public input. Feedback will be incorporated into the final plan that will be included for Committee/Council agenda for recommendation/approval. These meetings will be publicly noticed following the City's process.

This task will also include regular check in meetings and project management for Task 7.

Task Deliverables
Council/Committee memos and minutes.
